JUNCTION FIFTEEN

Junction Fifteen create award winning innovative and contemporary furniture for the domestic and contract furniture market

Established in 2012, Junction Fifteen launched their debut collection at the London Design Festival in September 2013

The collection is manufactured using high quality sustainable materials and British craftsmanship. The company was awarded the prestigous Design Guild Mark award for the Olly Stool Range.

Our pieces celebrate the versatility of tubular steel, exploring seemingly complex arrangements and elegant clean lines.

The Olly Stool, an updated take on the traditional tri-symmetric stool, with three tubular steel frames that appear to be self supporting and a beautiful solid European Oak or Birch Plywood stool top. The Olly features fun bowling ball style finger holes for lifting and positioning.

The Olly Stool was awarded a prestigious 'Design Guild Mark' in 2014 for excellence in British furniture design & manufacture.

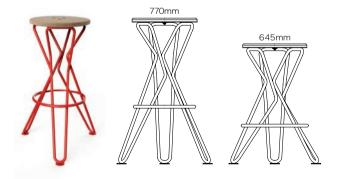

OLLY STOOL

The bigger brother to the Olly Stool, the bar stool utilises the same 'twist' frame style to great effect. Three identical steel legs are intelligently welded together to appear self-supporting. Each leg is formed in two halves and joined with a high quality seamless weld to create a continuous closed loop structure. The bar stool top features three bowling ball style finger holes for ease of positioning and carrying.

OLLY BAR STOOL

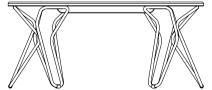

The newest member of the Olly Family is the Olly bench. We have utilised details from the award winning piece, the resulting form being a phase of mitosis, with two Olly Stools seemingly in the process of duplication.

Key details including the frame and seat holes are present to retain the strong family identity with other pieces in the Olly family.

Cousin to the Olly Stool a traditionally functional piece with a contemporary twist. Perfect for hallways and trendy office environments the coat stand features subtle hooking points and shoulder width proportioned framework.

OLLY COAT STAND

Our Tune Table's uniform and elegant form provides a timeless aesthetic suitable for a broad range of interior styles and environments. The eye catching open loop feature gives a classic yet modern style.

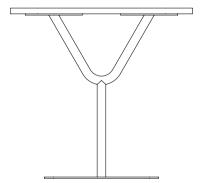

Y-TABLE

Our Y-Table showcases a striking and inviting form with a unique upper bend seemingly balanced onto a vertical support. A unique and versatile aesthetic suitable for most commercial environments and interior design styles.

Y TABLE

Painted steel frame / wooden table top H745mm Square Top: W800 D800mm for available finishes please see back of the brochure

Perfect for the modern kitchen or contemporary bar, the Stem Stool also utilises the strength and manipulative nature of tubular steel. A simplistic organic form devoid of excess detailing ensures a piece suitable for multiple environments.

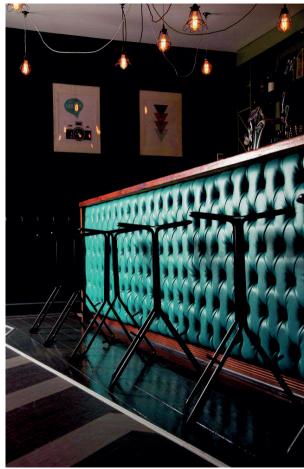

Distinctive intersecting contours converge to create the strong and durable Airo chair. A combination of mixed materials merge to create a unique aesthetic. The laser cut back support appears to be random in pattern placement, offering an innovative progression from uniform punched hole patterns often seen. The slot detail on the seat top has a functional benefit of ease of assembly as well as providing a unique detail that integrates and unites the components.

Available in wooden and metal seat backs

The Morf chair has a soft and inviting aesthetic due to the large radius bends and simplicity of structure. The chair showcases the unique variable leg thickness and closed loop profiling, utilised on all pieces within the Morf family of products. Ideal for demanding environments with a low centre of gravity and strong steel framework.

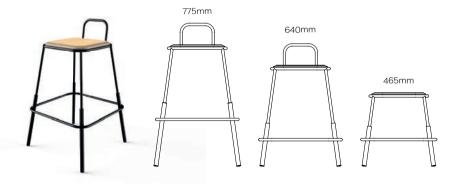

MORF STOOL

Our Morf stool has a minimal, coherent and perfectly proportioned appearance. A variable leg thickness offers a unique detail welded within closed loop profiles. Ideal for demanding environments with a low centre of gravity and strong steel framework.

MORF STOOL

The FL513, an all metal, powder coated stool with styling cues taken from the world of aviation. The FL513 appears delicate in form however similar to its inspiration, the aircraft wing, remains remarkably strong. The wing style seat top is also very comfortable.

For orders that require a bespoke colour or finish, please contact us to discuss your needs.
